Recommended minimum PC specifications for running Balmori Software applications

In response to frequent inquiries from our customers and prospective customers, we provide the following listing of minimum hardware specifications required to run Balmori Software Inc. applications.

How to read the specifications:

First, look at the Minimum technical specifications (middle column in table below). These constitute the minimum capacities, speeds, or other technical specifications needed to run BSI applications adequately.

Second, look at the brand names (rightmost column). In putting together a PC, the brand names of the components are important, because the plain fact is that there are quality differences from brand to brand. (Please note that Balmori Software does not sell PC hardware, does not have any special relationship with the manufacturers or distributors of any of the brands mentioned, nor does Balmori gain any financial or business benefit by recommending specific brand names. We determined these brand names through sheer experience and feedback from our customers over many years.) Bottom line: when PC shopping, look beyond price.

COMPONENT	MINIMUM TECHNICAL SPECS	BRAND
1. Processor	At least Celeron 1.7 GHz; or...	Intel
	...At least Duron	AMD
2. Motherboard	Motherboard model must support the processor you have chosen	Asustek or Intel
